

All Weather Insulated Panels announces the publication of the IAPMO Uniform Services Evaluation Report, ER-301 for Insulated Metal Panels. The report is a similar evaluation to the International Code Council's Evaluation Service (ICC-ES) report that states All Weather's compliance to applicable International Building Code requirements and acceptance criteria. Both services are widely recognized and trusted by code officials, contractors, architects and engineers.

The International Association of Plumbing and Mechanical Officials ([www.iapmoes.org](http://www.iapmoes.org)) has more than 75 years of experience in evaluating products for code compliance and 85 years of experience in code development. IAPMO is accredited by the American National Standards Institute (ANSI) and operates under ISO/IEC Guide 65, "General Requirements for Bodies Operating Product Certification Systems. IAPMO is also compliant under Section 1703 of the International Building Code 2012 for Approvals and Inspection Services. They are recognized by the Structural Engineers Association of California as one of the two prominent Evaluation Report providers.

More recently, IAPMO entered the building products and materials market under their Uniform Evaluation Service (UES) program. Products reported on an IAPMO UES Evaluation Report have been thoroughly examined by the UES staff for testing, calculations, quality and other factors to determine the insulated metal panels are code compliant. Surveillance audits of manufacturing plants are conducted to ensure consistency of production and conformance of quality control procedures.

Further information regarding IAPMO Uniform Evaluation Service benefits may be found at: <http://www.iapmoes.org/Pages/BuildingOfficialBenefits.aspx> or by contacting your AWIP representative.
